Create one-off JPG and RAW format files from your RAW files. It supports Adobe Camera Raw AI and will detect cameras stored in the RAW file itself. Now, this is a fairly modest feature to increase your editing speed. But look at it this way: For every camera mounted on your computer with an existing JPEG format, you could have those RAW files use the little bit of format conversion time these one-off files take before being saved in their respective formats. Thus, the same BM format commands could be used to convert RAW image files to JPEG and PNG. In addition, you could use them to adjust a variety of other settings as well. This becomes a very useful tool especially if you often slap a variety of formats on the same photo - from a JPG to a RAW to a TIFF to a CMYK to a PDF. It's a nice way to spruce up your images, especially if you have a nice store of files in place that you could open up to add a new layer! The Magic Mask tool provides focused information and steps for creating professional results in editing your image, by making it easy to select areas of the image. Material Mask for images provides a layer that masks content based on the foreground layer's colour to expose a new layer of information. (I've found this to work for insect wings and beetle wings quite well - yielding really good results. With a release cycle as long as an elephant's life span, it's hard to expect Adobe PhotoShop and Adobe Lightroom to keep up with the times. Still, Adobe has managed to keep its software relevant and a powerful tool for users of any skill level, no matter the photo or video editing task at hand. Now that the company is making web-based programs to complement its stand-alone apps, the transition to the browser-based apps feels like it's in good order.
